# Mozilla Firefox

Step 1: To manage cookies in Firefox, open the main Firefox menu (three horizontal bars) and click "Options" or "History".

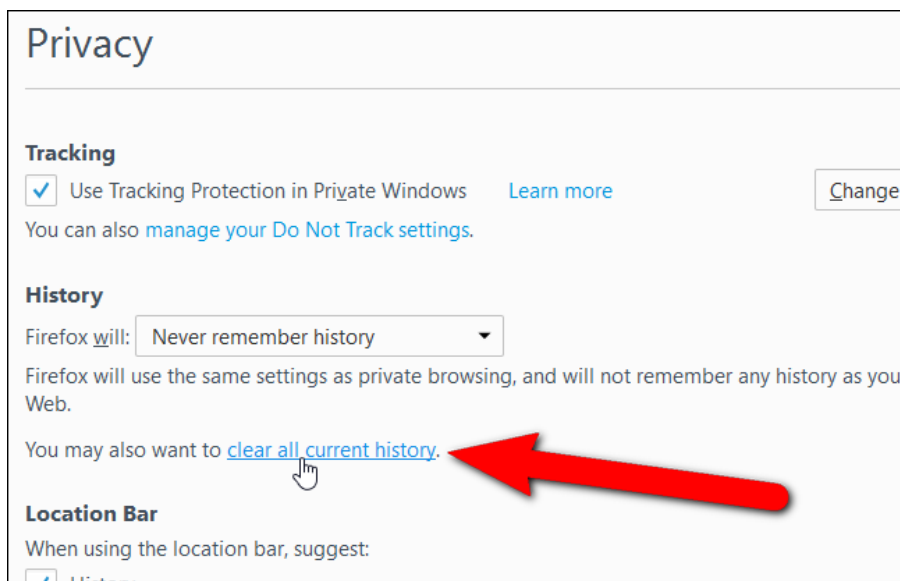

Step 2: The Options open on a new tab. Click Privacy in the list of items on the left side of the tab.
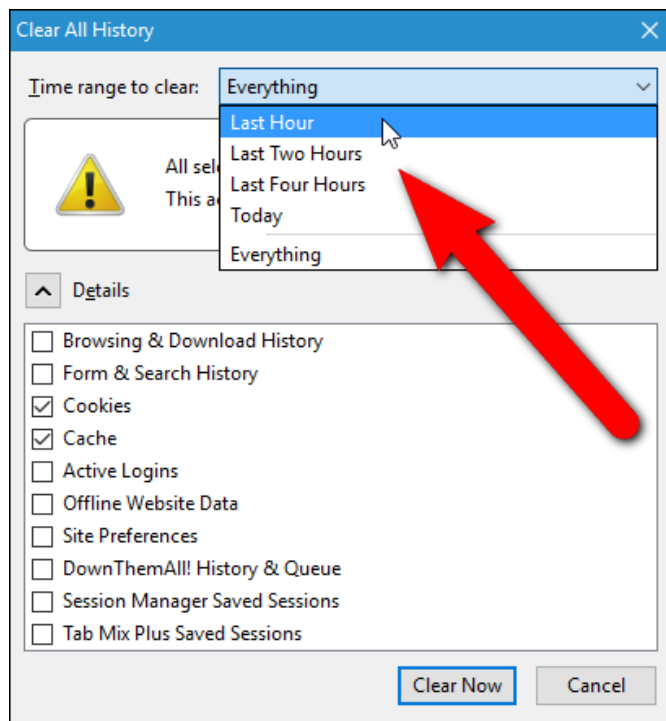

Step 3: Make sure the Privacy screen is active on the Options tab and click the "clear your recent history" link under History. This option is only available for the "Remember History" option, not when "Use Custom Settings for History" is selected in the Firefox will dropdown list.

Step 4: If the "Never Remember History" option is selected in the Firefox will dropdown list, the "clear all current history" link is available. The Never Remember History option causes Firefox to restart in private browsing mode.

Step 5: Clicking either "clear your recent history" or "clear all current history" opens the Clear All History dialog box. Here you can select a Time range to clear.

Step 6: Then, make sure the Cookies box is checked and then, click "Clear Now".
